## Dustins dirted tank guide service reviews complaints

So we use Slack services, Slack uses Asana, and we really see them as complimentary which is why the integration exists. There was an error signing up for restock notifications. Are you going to spend that on laundry services? Personally I'm not up to the challenge, I'm not into organic substrates in aquariums... Hence the nurseries grow them lush and green on rockwool. To truly understand life... So I think there's a lot of advantage in having a company that's focused on just one part of the market. You gotta- you either slow down, or you have to take a vacation and so you think about the longer cycles that these companies are on, for years, they're actually just shooting themselves in the foot, and burning out employees, and losing productivity. How do you view your relationship with Slack or the other challengers? It seems like you're taking the approach at Asana of investing both in culture and in the business. One must fully understand why a child on a Merry go Round waves each time the ride comes round...and why the Parent's will wave back each time. Simple. It tends to be a bit hot in the beginning and can benefit from a little soaking. Depending on what you planning to plant, still you can slow burn as good on substrates like Akadama, Fuji sand and other lava pumis related gravels and add root and water collum fertilization. ... Cheers, Marcel.. DUSTIN MOSKOVITZ: We've really just been developing this work-tracking market, which is a new and emerging market of collaborations software, and I think we've just made a lot of progress as establishing this as an important part of how teams work. We now have about 12,000 paying customers, like whole companies that use the product. BI: So are you profitable yet if you have 12,000 customers? At the same time, if you optimize entirely for growth, you might set up some things that are really hard to shake down the road and just create a business that's intrinsically not sustainable. People find it is best to use it at a depth of about an inch and cap it with sand or something else in a layer at least another inch. Hello there, I was thinking about a dirted tank at one point and came across this guy from America called Dustin. MGOC is commonly used but does have a few problems. Because I think if you look at any of the actual science and research on this, you get the exact opposite conclusion. ...Or I've also got a 5 Step DVD of how to Dirt a tank if you want just watch how it is done.... I just remove the big pieces of wood and smooch the big clumps/clods of dirt. Emerged where they have loads of Co2. Doesn't really make sense to me. So I see it as kind of a false choice of things are constrained so we pull back on culture. I would argue that's the time when you need to invest in culture because only the companies with strong cultures are going to survive that kind of, you know, that kind of friction in the marketplace.BI: When you say invest, you're not saying it means monetarily. (not to mention avoiding an algae mess) Look at the price of some of the substrates companies try to sell you, ala Eco Complete or Amano Soil. This is it. But I with Darrel on this one, loam is one of the best options.. It's pretty hard to sort of be profitable all along the way, unless you really pull back on your growth. When you push people to work harder you get less out of them. They also are each very conducive to being platforms. No pun intended. Are you going to spend that on healthcare? And it has good exchange capacities most aquatic plant like it a lot. Really I see those things as optimizing your efficiency because you'll be able to retain people better, they'll be more engaged, they'll be more productive. Again those parts of the market are very broad and have a lot of depth in themselves. He seems to be very keen on dirted tanks here is a link to his web site. We look at the broader collaboration space, [and] we think of it in terms of these three major buckets. And then messaging and communications that's really where Slack fits in, but also products like Skype and VoIP services. So you hear a lot of people talk about unit economics where literally there are some companies that are losing money on every transaction happening on their system. it doesn't degrade so fast if it ever does ?? One practice all of them did is kinda drystart the cycle with only moist soil for several weeks.. Time and energy. I'm not sure it has a whole lot more to offer than the dirt in your backyard but then again I suppose that depends on the dirt in your backyard assuming you have a backyard in the first place. Have a look at the EL NATURAL AND LOW TECH section for plenty of inspiration darren reserves the right to go off-topic There is a "sticky thread" on dirted tanks in the substrate section. Now it's not true on very small timescales, you can work hard for a week, you can work hard for a couple weeks. We have some set costs, we have the investment in R&D, and we need to get to a certain scale for those to kind of amortize themselves out. But the intrinsic costs of delivering the service to users, it's often called gross margin, that's positive.BI: A lot of these companies that are feeling the crunch are losing or eliminating some of these aspects of culture. Thanks for the help everyone! Many 'garden' composts contain things you don't want, such as lime. This is 16 pages of Q and A about Dirting your planted tank, or just Buy the Dustin Dirted Tank Guide with a digital download by clicking here. It's much more important that the cost of delivering the service, the amount you're investing in R&D, the amount you're investing in sales and marketing, that those things are sustainable, and the other stuff is just kind of symbolic. I'm on mobile right now so typing is kind of awkward. There's a big shift happening towards valuing profitability over hypergrowth.DM: Well I think the important thing is that you're headed towards profitability. There are many videos on youtube to find about setting up a dirted tank, with and without peat, with compost or without mixed with kitty litter etc... But as soon as you've pushed more than like, 60 hours for like 3 or 4 weeks in a row, science shows that you just become less productive and you pay for that. Tanks for watching. DM: Like anything you have to be intentional about how you spend your money on perks and benefits, and I think most companies just carve out a percentage of payroll and then optimize within that. This will also provide you the opportunity to remove the floaters such as bark. I guess this is done, not to get those massive amonia and nitrite spikes in the water collum and so you do not need to do so many water changes to cycle it. I found it lacks nutrients and should have spent more money on a better product. DM: They can maintain that balance just by being objective about it and really reflecting on what that grinding is costing them. You can really have a budget of \$0 for culture and still get a lot done, you know. Using soil is neither good or bad, advanced or for novices- Its cheap, gets results and can give issues. Submersed low tech and then give 'm a highly fertilized organic soil?? Plant grows is very slow. BI: How would you argue companies should invest culture, in a time where they're cutting back on perks, instead of putting the money elsewhere?DM: I mean, I generally see this as a false choice. I think there's very few kinds of culture that you have to spend for. You just have to talk about it, spend time on it. So I wanted to know what kind of prepwork I would have to do on the soil and how much of it to put in. I'm going to keep it low tech and simple. I start off with straight up how it is done then go into 14 pages of all kinds of the craziest and perfectly legit questions about how to dirt your tank. You could look in the pond section of the IIs for Water lily substrate, this contains loam and everything else that rots and stinks. . It gets written about as something more symbolic, but I would just point out that things like that are sometimes penny-wise pound foolish. You have to be smart about that. Buy the Dustin Dirted Tank Guide with a digital download by clicking here. One is sort of files and file sharing and document collaboration, so that's everybody from Dropbox to Box and like Google Apps. Dirted tank's are all I have ever done or plant's in pot's of dirt capped with gravel (large cichlid tank's) Plant heavily, and leave plant's alone. DM: You know, it's really hard to predict like the far future on things, but I would just point out that there's a large surface area to each of these things. DM: [Laughs] No. The reason why we're not profitable is more about economies of scale. Why should you pay \$9 for it? Buy this guide and avoid all of that. Sometimes I think these things get misinterpreted, like a company will drop a benefit, and really it's because they're shifting that money that they decided would be more useful for employees. So I have decided to try a dirted tank in a 10g tank. One tip in this book could save you from killing plants by doing your dirted tank wrong. Here's what he had to say on Asana, why it's important to invest in culture, and why he believes Asana can peacefully coexist with Slack .The following Q&A has been lightly edited for length and clarity.BUSINESS INSIDER: Five years in, what's Asana look like now, and where do you want it to go? I used it in my first scape. And then this third category of work tracking is really the market that we're trying to develop.BI: Would you ever consider acquiring Dropbox or selling your company to Slack to kind of merge these spaces into a small number of buckets? Just the question in the title, it's on sale right now so if I were to get it now would be the time. As a side note question, is a dirted tank something a rookie should be attempting or is more for the advanced hobbyist? Most low tech suitable plants are also not the plants that need lots of everything. I have used miracle grow organic soil and plain old top soil which I add peat and cat litter to. Focus.BI: Especially in this market conditions where startups are feeling the squeeze, how can employees maintain a positive work-life balance when the rhetoric is to hunker down, work harder? Also how long will the soil last before I have to start adding root tabs? plan on using miracle grow organic potting mix, if that works. Despite increased competition in the enterprise space, Moskowitz remains confident that prioritizing culture and business — and not pushing yourself too hard — will keep Asana on top coming out of the downturn. Business Insider caught up with Moskowitz after he gave a talk at Startup Grind. Please try again. That's what I really see as so tragic about it. They think they're optimizing the business by kind of hurting their employees, but really it's just the worst of both worlds. But that's probably just me.. What's Asana's niche in the space?DM: We really don't see Slack as a challenger, we're actually mutual customers. People have been asking for it and asking me about how to do it for about 2 years now. This bloke is very loud but also amusing. BI: Well is that you? They're not getting anything out of it and they're hurting people.They're not getting anything out of it and they're hurting people.BI: In the last couple of years, there have been a lot of enterprise companies that have taken off like wildfire, like Slack. I can agree with the fact that for slow burners with a lot of rooted plants it is a very good practice. DM: No, it's twice. Michael over at APC has a great thread on suitable soils. Asana cofounder Dustin Moskowitz Asana Dustin Moskowitz worked hard to build Facebook, but looking back, he thinks the social network he cofounded succeeded in spite of all the marathon work hours, not because of it. Now at his own startup, Moskowitz is hoping lightning strikes twice, but he is putting an emphasis on building a company that's healthy both financially and for its employees. It will be a challenge as the market squeezes startups and many are feeling the pain of investors pulling back. If you buy the guide here on Dustin's Fish tanks you'll receive an email with the download link in it.Don't Forget To Buy our Growth Juice and Iron Supplements for your plants!! Sorry I didn't know where to specifically post this, and I also wanted to get a lot of feedback. Do the Dirt People. This is how it is done. For the foreseeable future I expect all these companies to be separate. So we're on an extremely good trend in terms of getting there in the next several years, but we're not profitable yet.
